

SAFE ZONE

Keep the most important details within the green Safe Zone to avoid having them cut off.

Must fill the entire artboard (including the red Bleed Area) if you want the sticker completely covered with artwork.

The template for the white backed stickers and clear stickers are the same. If you have transparency in your design it will remain transparent for clear stickers, but will be white for the white backed stickers.

There is no additional border added to the stickers. If you want a border on your sticker, you will have to build that into your design.

***IMPORTANT:** The clear stickers do not print white. If you have white in your design for a clear sticker, it will be clear on the final product. We strongly suggest either using an alternate color or using the white backed stickers if you have white in your designs that needs to be present.
