

DESIGN AREA

The full template is the design area.

Please upload a PNG file with a transparent background.

The laser only recognizes pixels, therefore any area where a pixel resides will be etched into the product.

Please refrain from using any gradients or blending modes. We recommend using solid black artwork at 100% opacity to assist you with visualizing proper artwork. The laser etches at one depth so keep your artwork simple and bold for the best results.

Keep in mind the laser area is 2"x2". Scale and legibility are important factors when creating your designs.
