

SAFE ZONE

The green Safe Zone is where the most important aspects of your design should remain. Anything outside of the Safe Zone has the potential to be cut off in the printing process.

If you wish to fill the entire print area, make sure to extend your artwork through the red Bleed Area. The Bleed Area will likely not show on the final print, but is in place to prevent potential errors.

We suggest creating artwork that flows with the shape of the template to better match the overall shape of the final product.
