

SAFE ZONE

The green Safe Zone denotes the area of the template where the most important elements of your design should remain. Anything outside of the Safe Zone has the potential to not be on the final product.

The red Bleed Area is on the template to assist with any potential errors that can occur during the alignment and printing process. The Bleed Area will likely not show on the final product, however you will need to extend your artwork through the Bleed Area. If you do not extend your artwork through the Bleed Area, you run the risk of having blank/white areas on the final puzzle.
