

SAFE ZONE

This puzzle template is set up to work for the 30pc, 110pc, 252pc, and 500pc puzzle sets. Since each of these puzzles is not the exact aspect ratio, it is important to follow the template guides closely to ensure the most important aspects of your design appears on all puzzle options.

The green Safe Zone is where the most important elements of your design should reside. Any elements outside of the Safe Zone has the potential to not be on the final product as well as give your artwork room to breathe from the edges of the puzzle.

The Bleed Area is denoted in red. This area typically does not show up on most products and is there in case of alignment errors that can occur during the printing process. Since this template is being used for multiple puzzle sizes, the bleed area will show on some of the puzzles. It is important to extend your artwork through the red bleed area to ensure the entire puzzle is covered with artwork. If you do not extend your artwork through the bleed area, you run the risk of having white/blank areas on your final product.

Please see the BestPractices in the teelaunch app for more in-depth information on the template and creation process.
