

DESIGN AREA

The entire template is the print area. There is no safe zone or bleed area for this product. However you have your artwork displayed on the template is how it will be printed on the final product.

Since the stadium bag is seethrough, we recommend creating designs that have transparency built into them so the graphic interacts with the product more.

Please remove or hide the template before saving your artwork.

Important Note

We highly recommend making sure your artwork is at 100% opacity. The Stadium Bags have a white base layer of ink applied underneath the printed graphic you upload. This is to help adhere the ink to the bag and help your graphic be more vibrant and visible.

If you have less than 100% opacity in your design, that portion of your graphic will simply appear fainter and more dull than the rest of the print.
