

# DESIGN AREA

The entire template is the print area. There is no bleed area or safe zone.

The base color of the product is white. If you have white in your design, it will be the absence of ink and will be the color of the base of the sign.

There will be a 1/4" white gap that surrounds the outer edges of the sign - this where the heat seal of the vinyl is applied.

Your design will be replicated on the front and back of the yard sign.
