

SAFE ZONE

The green Safe Zone is where you should place the most important elements of your design so they show up on the finished product.

The red Bleed Area will likely not show on the final print, but you should fill the bleed area with artwork/color/texture of you want the entire sign printed on. The base color of the sign is white. If you do not cover the entire template with artwork or use a design with transparency, the blank or transparent portions will be white on the finished product.
