

SAFE ZONE

The green Safe Zone is where the most important aspects of your design should reside. Anything outside of this area runs the risk of not being on the final print.

The red Bleed Area is where excess design goes. Elements within this area likely will not print on the final product, however it is good practice to extend your artwork through the bleed area to ensure the print covers the entire front facing print area.

The metal panels are unlike most products as there is no white sublimation zone. This means that there will be a metallic hue to your final prints. This also means any white within your design will NOT be present. Anything white will be the base color of the Metal Panels which is the silver aluminum color. This should be represented in the mockup images provided.
